

Local migration data dashboards

Need to brief local authority colleagues on the latest migration trends?

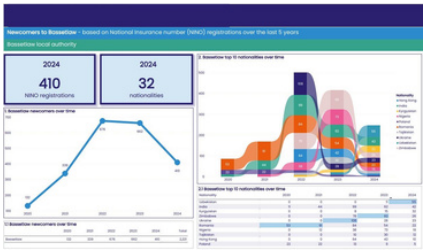

Behind each of our dashboards lies millions of rows of data that we've tailored and visualised to tell a story of migration to a particular place.

Users can manipulate the charts, maps and graphs in different ways to suit their needs.

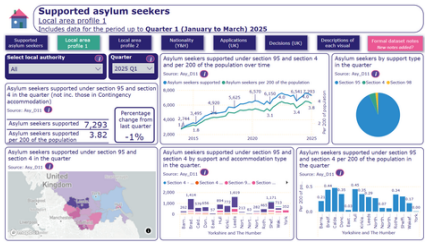

Topics can include, for example, the most recent arrivals, as well as asylum, refugee resettlement, unaccompanied asylum seeking children, Ukraine, and the EU Settlement Scheme.

Local migration data dashboards

To save you time and resources, you can commission standalone briefing documents that include a suite of visuals plus narrative analysis about your area, ready to use.

Each data product tells you about the current picture, historical trends and patterns of recent change, helping you to make informed decisions about service design and create effective strategies to respond to migration in your area.

> Having the data relating to a locality in my area – it was really useful and will benefit future work and understanding around the migration agenda, and will help evidence need...whether it is to develop projects or applying for grants.
